Footer menu also make troubleshooting easier for you as customer can provide you information about sign on user, software version number, trading date and price-list in

InfiPOS is easy to use and cuts down the hardware and maintenance costs drastically. Main difference between existing POS system is minimalistic hardware requirement for initial setup and scalability of the POS system.

InfiPoS has not been developed by just Developers sitting in cozy settings rather it has been developed working in partnership with real businesses trading from years in the market to ensure that the real-time problems and challenges faced by a business are addressed to.

EPOS & Hospitality industry has been slow to accept change of IT paradigm. InfiPoS is a modern & innovative take on the existing dated software currently being used in the industry. There are limited options available for businesses to run both fixed tills and tablet PCs on same platform. We take pride in the specialist features that bridge this gap in the industry. Our system provides small & medium businesses, a low maintenance solution to give them the freedom to establish themselves in the current market.
