TOUCH TOPUP

TouchTopUp Enhance Your Customer Experience

Sometimes carrying cash isn't an option. ICRTouch's TouchTopUp box is for any place that's using a cashless system and linked pre-paid customer accounts. It's designed to be used in prisons, schools, hospitals, leisure centres, factories and more.

TouchTopUp is a secure and simple wall-mounted box which accepts coins and notes. The cash value is transferred to a magnetic card or a contactless smart card.

It's 24/7

When it's needed customers can top-up their accounts at a time to suit them. All they need is a little bit of change. Cashless systems enable customers to credit balances online, but when the internet isn't available TouchTopUp is a secure and easy way to do it with cash.

Making things easy...

TouchTopUp features on-screen prompting to assist customers with their transactions. It means staff won't have to spend their time demonstrating how it works.

Show me the money....

TouchTopUp accepts UK coins (5p to £2) and notes (up to £20)....

...but that's not all. TouchTopUp is easily switched to accept different tender. It's already used and loved in the Eurozone.

TouchTopUp's back office functions...

TouchTopUp prints and emails daily reports. It monitors how much money has been credited and how many people have used the unit.

TouchTopUp connects directly to your network of tills.

TouchTopUp evolves....

From time to time you'll want to update your TouchTopUp machine. There's a handy USB Port which makes upgrading simple.

In the unlikely event that something goes wrong TouchTopUp will generate and send an email alert. It will warn you if it's full or if it needs maintenance.

And by the way....

TouchTopUp is made from industrial-grade steel and has twin locks.
